

ROBATECH AT PPMA: JUST THE RIGHT THING

Applying hot melt precisely and fast to reliably seal primary and secondary packaging is as important as cutting running costs. From September 26–28, 2023 at PPMA 2023, the Swiss manufacturer of gluing solutions, Robatech, provides insights on how customers can achieve savings in adhesive application as well as improve productivity.

With the slogan "You don't need much. Just the right thing." Robatech presents a new service at PPMA. With **GreenSaver**, users of adhesive application systems can have their savings potential determined in the areas of adhesive consumption, adhesive application, energy and compressed air consumption, safety at the workplace, and system availability. After the on-site inspection, a detailed inspection report provides a clear overview of effective levers for reducing costs and improving the sustainability balance.

Aligned with the focus on efficient adhesive application, Robatech will be presenting a preview of the new **EasyLine** application system at PPMA 2023. "This small system is designed for simple hot melt adhesive applications with an adhesive consumption of up to 2.5 kg/h and it offers an attractive price-performance ratio," says André Laubacher, the responsible Product Manager. "In particular, manufacturers of trays, folding cartons, cardboard cups, ice cream paper cones or similar products can use the EasyLine to glue in the usual Robatech application quality. We have equipped the system with completely new, very practical features. These make the installation and maintenance literally easy." The complete EasyLine with the Twist application head and the Rio heated hose will be available by the end of 2023. The new Easy adhesive melter is already available on the market.

Robatech at PPMA 2023 in Birmingham, booth E32.
