

ROBATECH BOOSTS PACKAGING PERFORMANCE

At the UK Corrugated Industry Trade Show from 6–7 October 2026 in Telford, Shropshire, Robatech will showcase two technologies designed to improve packaging quality and convenience. Visitors can experience PerfectFold liquid creasing live and learn how precise adhesive coating supports easy-opening e-commerce packaging.

Under the motto “Perfect folds. Easy opens.”, the company will demonstrate how liquid creasing and precise adhesive application can improve packaging processes and the customer experience.

The highlight is PerfectFold, Robatech’s solution for **liquid creasing of corrugated board**. During live demonstrations, visitors can see how creasing liquid is applied along the folding lines and penetrates the board, enabling accurate folding with minimal effort. The process helps achieve exact inner dimensions for perfectly fitting inserts, increases process stability and reduces waste. By minimizing issues such as gaps and fishtailing, PerfectFold also helps reduce customer complaints.

Robatech will also present solutions for the precise application of pressure-sensitive hot melt adhesive in e-commerce packaging. **Tear strips and silicone release liners** make shipping packaging easier and more convenient to open, while placing high demands on application accuracy and process reliability.

With the Vivo 18 coating head, PSA hot melt adhesive can be applied uniformly at speeds of up to 250 m/min for both applications. Precise adhesive metering supports reliable processing and can reduce adhesive consumption by up to 30 percent.

Visitors to the UK Corrugated Industry Trade Show are invited to meet the Robatech team, experience PerfectFold live and discover how both technologies can contribute to more efficient production and better packaging.
