Conflict Minerals Policy

Robatech is currently not directly subject to statutory Conflict Minerals regulations, such as EU Regulation 2017/821, Section 1502 of the U.S. Dodd-Frank Act, or the Swiss Supply Chain Regulation (VSoTr). Nevertheless, Robatech voluntarily commits to responsible and ethical sourcing practices and supports international efforts to prevent the use of minerals that may finance armed conflict or are potentially related to human rights violations.

At Robatech we seek to ensure that the products and materials we source and supply do not contain tin, tantalum, tungsten, or gold (3TG) originating from conflict-affected or high-risk areas that could directly or indirectly contribute to armed conflict.

Our non-acceptance of conflict minerals has been clearly communicated to all relevant suppliers. This commitment is embedded in our supply chain expectations and is further reflected in our Supplier Code of Conduct, which requires all Robatech suppliers to act responsibly, transparently, and in line with local, national, and international regulations, as well as internationally recognized due diligence principles.

Based on the information reasonably available to Robatech, we have reviewed our supply chain and found no substantiated indications of violations of applicable Conflict Minerals principles. However, we do note that many of our suppliers are multiple layers removed from the extraction of raw materials, which limits their ability to trace all processed minerals in each individual case back to the originating smelters or refineries.

As a result, Robatech relies to a certain extent on the accuracy and completeness of the information provided by our suppliers. Suppliers are expected to exercise appropriate care and to inform Robatech of any relevant risks or changes related to the origin of all procured minerals.

This Conflict Minerals Policy is reviewed periodically and updated as necessary to reflect changes in regulatory requirements or supply chain structures.
