

ROBATECH AT AUSPACK 2022

From May 17 to 20, 2022, Robatech will show how primary and secondary packaging can be glued in an energy-saving, repeatable and reliable way at the AUSPACK packaging and processing exhibition in Melbourne.

The new adhesive application system from Robatech advances reliability in the gluing of primary and secondary packaging to a new level. With the smart Vision melter, the fully insulated Performa heated hose and the fast SpeedStar Compact application head, the manufacturer reduces power consumption by up to 30% compared to similar adhesive application systems.

The **Vision melter** keeps adhesive viscosity constant and ensures stable delivery pressure. With the Smart Terminal – a new type of LED display on the melter – the operating personnel can see even from a distance whether the gluing process is running smoothly or, for example, whether adhesive needs to be refilled. The **Performa heated hose** is quickly and easily connected to the application head and the melter in a plug-and-play process. And with the **SpeedStar Compact electric jetting head**, Robatech demonstrates the value of automatic stroke control: The intelligent control electronics ensure the precise application of millimeter-sized hot glue dots and short beads – constantly over the entire service life of 500 million operating cycles.

Also on show at the exhibition: The new **Vivo 18 coating head**, which can be used to apply tear strips directly to an adhesive application on cardboard packaging and to produce silicone release liners cost-effectively.

ABOUT ROBATECH

Headquartered in Muri, Switzerland, the Robatech Group is a leading global manufacturer of innovative and sustainable adhesive application solutions for industrial hot melt and cold glue applications. Robatech has produced and supplied high-quality controls, application heads, melting and dosing systems since 1975. Robatech representatives advise and support customers in 80 countries in a wide variety of industries around all questions and concerns regarding adhesive application and optimization of gluing processes.
