GLUING

SECONDARY PACKAGING
Economical and Reliable Gluing

GLUING SOLUTIONS **ROBATECH**

FLEXIBILITY THROUGH MODULARITY

Do you want to glue secondary packaging efficiently and yet sustainably? Robatech's adhesive application systems can be used in a wide range of applications, including in on-demand packaging machines for e-commerce. They apply hot melt adhesives economically and still glue secondary packaging reliably.

Modular and Compatible
We will put together the ideal adhesive application system for your specific application. Today and in the future. This is because our system components are compatible with each other, as well as with older devices.

Safe Working
CoolTouch insulation on the application head, melter, and heated hose protect your operating personnel from burns. With an automatic filling system, you also increase the safety of personnel and production.

GreenGluing
Energy-efficient, insulated equipment ensures less heat loss, conserves adhesive and reduces your operating costs.

Full Cost Transparency
With optional quality control, you can monitor the adhesive application position and adhesive consumption. You are informed in real time about deviations from the defined tolerance range and can respond immediately.

We are Here for You
We provide fast and straightforward assistance anywhere in the world to reduce downtime in your plant to a minimum.

Flexible Bonding in End-of-Line Packaging
- Securely bond on-demand packaging
- Increase production thanks to maximum system availability
- Industry-leading energy efficiency

Save Costs with Stitching
- Save up to 40 % adhesive with intermittent bead application
- Electromechanical application heads with fast switching cycles for high production speeds

Durable and Precise
- Reliable bonding thanks to precise adhesive application and reliable system components
- Durable products for high process reliability

YOUR ADVANTAGES

- Modular design of system components and backward compatibility. So your adhesive application system fits your needs.
- Protection of personnel and production: CoolTouch insulation on the application head, melter and heated hose, automatic filling system
- Energy-efficient equipment for resource-saving production
- Operating costs under control thanks to high process reliability and optional quality control
- Maximum system availability: Service hotline, local service experts around the globe, readily available spare parts
- Robatech Control System for easy system integration, operation, and monitoring
